### **DETAILED ACTION**

Page 2

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-26 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Wang et al., Highly Accurate Data Value Prediction using Hybrid Predictors.
- 3. The rejections are respectfully maintained and incorporated by reference as set forth in the last office action, mailed on February 11, 2004.

### Response to Arguments

4. Applicant's arguments filed August 12, 2004 have been fully considered but they are not persuasive.

On pages 8-10, Applicant argues in essence:

"As specifically disclosed in the section above, it is clear that the purpose of the PHT disclosed in Wang is to determine whether the 2-level predictor is to generate a predictor value. This is affirmed by Figure 6, which illustrates the values that are compared to determine whether the maximum count value in the selected PHT entry is greater than the specified threshold value.

Applicants submit that the PHT table in Wang is not capable of "...determining a hit in the second table, said second table to provide a prediction value, said hit in the second table being determined according to a function of said instruction and said first table..." (e.g., as recited in amendment claim 1). Similar claim are found in claim 13, ..., claim 19, ..., and claim 24"

However, Wang has in fact taught determining a hit in the second table (Page 288, Figure 6, PHT), said second table to provide a prediction value (Page 288, Figure 6), said hit in

Application/Control Number: 09/750,150 Page 3

Art Unit: 2183

the second table being determined according to a function of said instruction and said first table (Page 288, Figure 6, The instruction will produce a final prediction from either the VHT or the PHT. When the VHT does not make a prediction then the prediction for the instruction comes from the PHT. The VHT provides values to index into the PHT. The hit, or prediction, from the second table, or PHT, is necessarily a function of the instruction and the first table as the values to index into the second table are provided from the first table.). Therefore this argument is moot.

### Conclusion

- 5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 6. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tonia L Meonske whose telephone number is (571) 272-4170. The examiner can normally be reached on Monday-Friday, 8-4:30.
